

Overall test p-value = 1.00
Equivalence margin: (-1.3, 1.3)

Note: All tests follow the intersection-union principle and thus, overall p-values are the maximum p-value across lower I

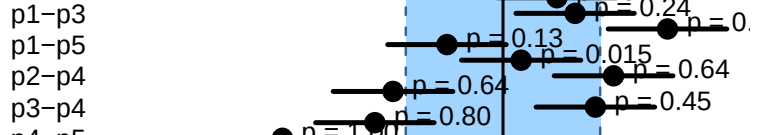

Note: All tests follow the intersection-union principle and thus, overall p-values are the maximum p-value across lower I

Note: All tests follow the intersection-union principle and thus, overall p-values are the maximum p-value across lower level tests.

Overall test p-value = 1.00
Equivalence margin: (-2, 2)

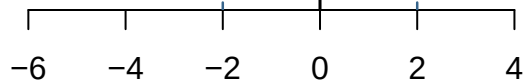

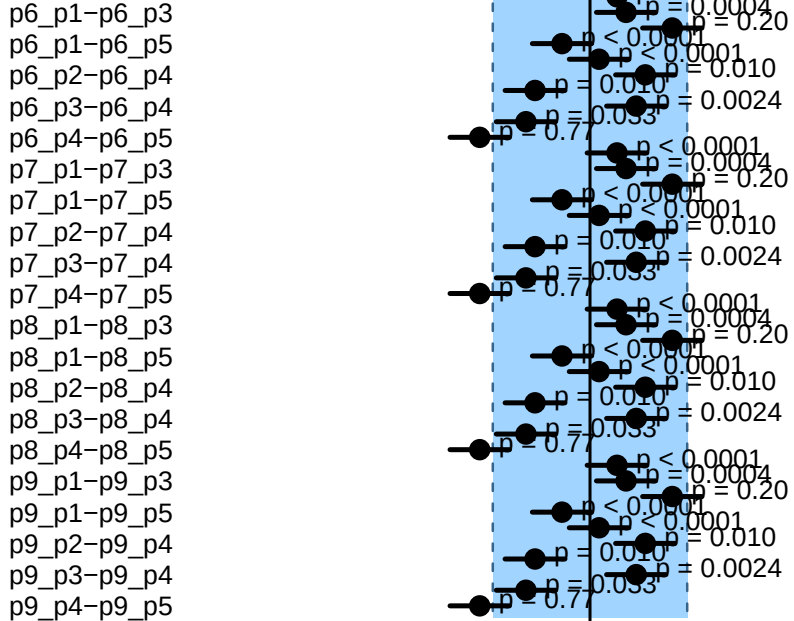

Monoculture differences (p = 1.00)

Within-group interactions (p = 0.31)

equi-mono_av

Between-group interactions (p = 0.77)

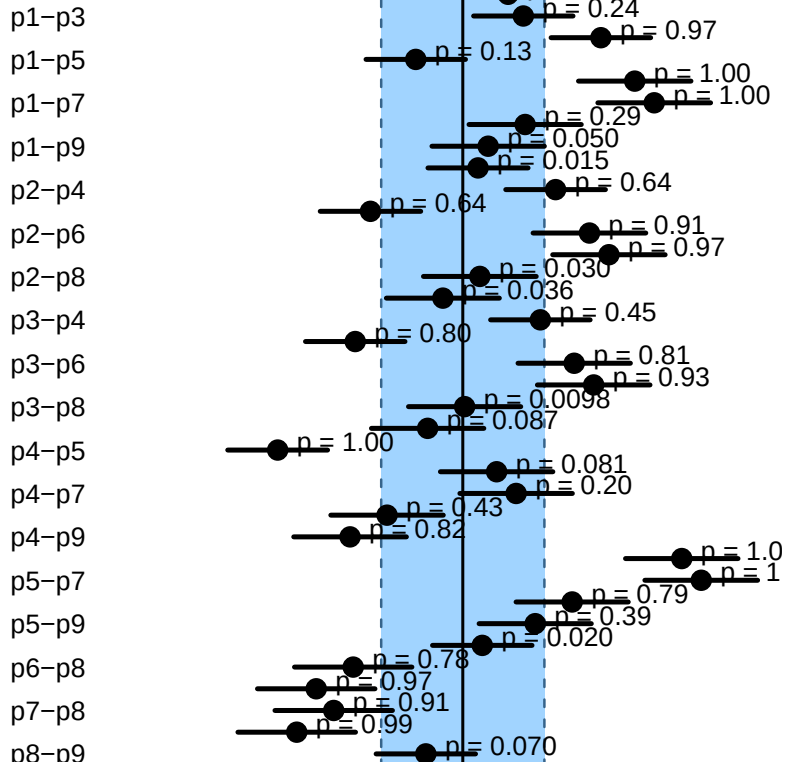

Difference in predictions

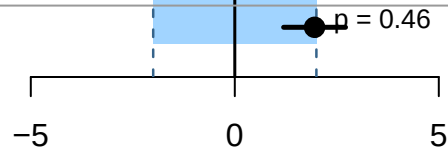

Note: All tests follow the intersection-union principle and thus, overall p-values are the maximum p-value across lower I

Overall test p-value = 1.00
Equivalence margin: (-2, 2)

Monoculture differences (p = 1.00)

Within-group interactions (p = 0.46)
equi-mono_av

Difference in predictions

Note: All tests follow the intersection-union principle and thus, overall p-values are the maximum p-value across lower level
